

ORGANIZE - SHARE

DANIEL J.

AGE 26

OCCUPATION Design Director

LOCATION Chicago, IL

GENDER Male

TIER Expert

MOTIVATIONS

Daniel loves to save images he finds online for inspiration. He's bookmarked hundreds over the course of 3 years. However, the browser can just be slightly frustrating. Creating folders, managing them, etc. It's sometimes overwhelming and should be easier. He wants to collaborate with others on his team to share what he finds with ease. Subscribes to several software applications, and never can remember passwords. Would love something that combines a few of those.

GOALS

- Share inspiration with his team
- Organize content into groups
- Ability to write and share notes

FRUSTRATIONS

- Difficulty managing bookmarks
- Too many different softwares
- Not accessible on all devices

BIO

Daniel is a young, single working professional in a big city. He's worked at a number of startups in Chicago, and is now leading a team of 4 designers. He's an early adopter, grabbing up the latest technology devices. He commutes into the city by subway, browsing on his phone during the 30minute ride. He's interested in photography. He loves trying a new restaurant every night if possible.

"If I had a way to share inspiration with my team, we could save time from meeting constantly."

OBSERVE - FORGET

SUSAN S.

AGE 33

OCCUPATION Marketing Manager

LOCATION Seattle, WA

GENDER Female

TIER Casual

MOTIVATIONS

Susan typically bookmarks content she finds interesting in the browser. However, she often forgets what she's bookmarked, and keeping track of it can be slightly overwhelming. She primarily uses her laptop at work to gather this type of content, but without it being synced online, she's unable to access it at home. Susan likes to keep notes for herself and for work, but hasn't found a tool she enjoys. While she works closely with peers, she rarely shares resources with them.

GOALS

- Keeping track of bookmarked content
- Ability to view at work and home
- Would like easy notetaking software

FRUSTRATIONS

- Only accessible on work laptop
- Hard to remember what's bookmarked
- Other software is difficult to use

BIO

Susan is married with two kids, residing in the suburbs of Seattle. She is the marketing manager for a midsize company. When she leaves work, Susan doesn't take her laptop home with her, trying to distinguish the boundary between home and work. However, she often finds herself working at night to finish projects. Susan's an outdoors person, working her way across the Northwest. She loves camping while reading good books.

"I can never remember what I bookmarked, so having an easy way to view the stuff I like would be fantastic."

HUNT - GATHER

AMY W.

AGE 32

OCCUPATION Web Designer

LOCATION Katy, TX

GENDER Female

TIER Professional

MOTIVATIONS

Amy is new to the world of design, and is currently gathering everything possible to help her. Typically, she downloads an image or takes a screenshot, and then she stores these on her computer. She's used Pinterest before, but not for work. She likes being able to pull up the site anywhere, but organizing the content isn't the easiest. For notes, she defers to pen and paper. It helps her remember things, but Amy often forgets to take the note pad with her when she leaves the house.

GOALS

- Centralized way of organizing inspiration
- Simplicity of pen and paper into device experience
- Synced online, not computer

FRUSTRATIONS

- Older computer = less hard drive space
- Doesn't know what tools to use
- Organizing is time consuming

BIO

Amy just recently became a web designer. She's picked up a few freelance jobs and is interviewing with several companies for a fulltime position. She uses her phone to check Facebook and Twitter, and sometimes likes to jot down notes to remind her of things she needs to do. When she's not chasing her toddler around the house, Amy loves to hit the beach, just an hour south of her. Swimming, running, and eating are her passions.

"Right now, my computer can't take all of the images I'm trying to save. I need a simple way to capture and refer back to this stuff."
